

PC and Server Installations

PC and server installations are ultimately core to our business model and we take pride in installing working solutions in an efficient timescale. When you purchase a new PC or Server from us, you will quite rightly expect it to be setup and configured. As your IT administrators we have the tools and knowhow to make sure your new hardware is ready for you.

What's included?

When a PC or Server is ordered through ACT Systems we also schedule an onsite visit from one of our engineers to correctly install the hardware into your office. Whilst we are there we will make sure all programmes are operating as they should.

Can I expect Downtime?

We understand that time without a Workstation or Server causes huge productivity loss. With this in mind we always keep downtime to an absolute minimum.

Our engineers have this down to a fine art and have the ability to get users back up and running in a very short amount of time.

Will you dispose of old Equipment?

Disposing of old equipment is very important! If not handled correctly and your old Hard drives end up in the wrong hands, it is possible to recover data and access sensitive information. ACT Systems works very closely with iQeol Intelligent Recycling who offer Secure Data wiping and disposal at no charge.

iQeol will also assess your old hardware and if found to still have some life left in it, will refurbish and donate to charity on your behalf. This charity has helped thousands of underprivileged children all over the world get online.

ACT Systems PC and Server Installations Pricing
